

Reliable. Renewable. Remarkable.

FORESIGHT IS 20/20™

With its distinctive form and engineered optical performance, 20/20™ is the solar light system from Sol that directs light most efficiently for the best lighting. 20/20 increases pole spacing, lighting uniformity, simplifies installation with the world's first solar pole and incorporates sustainable design to maximize your return on investment.

FEATURES

- **Unified design:** luminaire, light engine, PV assembly and pole are designed from the ground up to exceed the demands of modern solar light performance and durability
- **State-of-the-art LED optical system:** provides illumination uniformity and wider pole spacing
- **Economic Value:** avoids costly trenching and wiring allowing it to be installed at or below the cost of grid-connected lighting
- **Green statement:** immediately understood by clients, employees, students and visitors; contributes no CO2 for light at night
- **Clean Lines:** unique vertical channels in pole makes positioning the luminaire simple with no visible bolts and provides integration of optional brackets or banner poles
- **FivePlus™ System Warranty:** includes 10 years on luminaire and electronics and 20 years on solar panels
- **Aesthetic:** low profile architectural design provides sleek and contemporary design

IDEAL FOR:

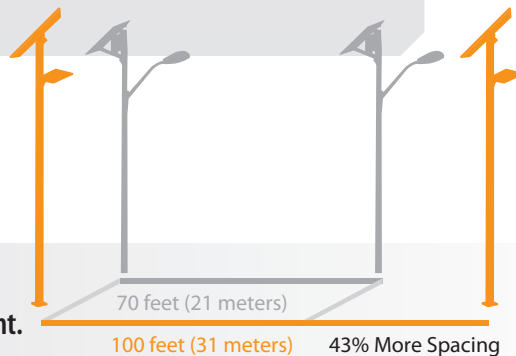

- Parking Lots
- Perimeter Security
- General Area
- Bike Paths and Walkways
- Streets and Roadways

The 20/20 solar LED lighting solution shines brightly and delivers superior light performance in an architectural package.

+ Less expensive than the grid in many aspects

+ Superior to solar lights of yesterday

+ Compare **Today's** lights with **Yesterday's**

Save money on solar lighting projects; fewer poles, more light.

EVERY REASON TO CHOOSE 20/20™

The revolutionary 20/20 is a complete LED lighting system that exceeds all other solar lights in terms of performance, aesthetics, economics and sustainability. In many cases, it exceeds that of conventional on-grid lighting systems.

PERFORMANCE

- Precision Type II and Type V optical systems are Dark Sky Compliant and reduce wasted light for maximized pole spacing
- Meets IENSA recommendations for parking lots, paths and trails
- IP65 luminaire rating extends LED life
- 20/20 pole designed to carry solar load and simplify installation and service

SUSTAINABILITY

- 100% off-grid, completely powered by the sun
- No CO2 produced
- No trenching, conduit, wiring or extensive site preparation
- Long-life design reduces replacement, maintenance and disposal cost

ECONOMICS

- Achieves grid parity in many applications - installed at a lower cost than on-grid lights by eliminating trenching and wiring
- Integrated solar lighting system with pole delivered together from the same supplier
- Never pay an electrical bill

AESTHETICS

- Low profile architectural luminaire mounts flush - provides forward throw optics and directs light outward eliminating unsightly and expensive arms
- Vertical channels in solar pole - for clean luminaire mounting with no visible fasteners
- Integrated battery enclosure, wiring and motion detection eliminate unsightly connections

HOW 20/20™ GOT ITS NAME

Two years ago, Sol set a goal to create a solar lighting system that offers performance, durability and energy efficiency at the lowest installed cost. Sol gathered a team of designers, engineers and customers to create a solar lighting system for today. The light symbolizes Sol's leadership for over 20 years, a lighting system that will last for the next 20 years and increased visibility at night for 20/20 vision.

The result... 20/20 Solar LED Lighting System

- + Enhanced autonomy provides advanced lighting and control
- + Intelligent controller allows dimming or programmed run times
- + Light where you need it
- + Five nights of energy reserve
- + Meets Buy America provisions
